

Stand Assembly Instructions

You will need:

- Power drill or power screwdriver (highly recommended)
- A #2 phillips bit
- A helper
- A refreshing beverage

1. Unpack all materials. You should have two legsets, two sideboards, and 8 screws.

2. Grab a sideboard and stand it on end with the pre-drilled holes facing upward, holding it firmly.

3. Have a helper hold one of the legsets over the top and align the holes in the side of the legset with the pilot holes in the sideboard. Place the screws through the holes in the legset being very careful to **make sure that the screws are passing into the pre-drilled holes in the sideboard.**

4. With your power drill, begin to tighten the first screw. Do not tighten it completely, but leave it a little loose. Next insert and tighten the second screw leaving it a bit loose.

5. Repeat the same procedure to attach the second sideboard, leaving both screws slightly loose.
6. Sip your beverage.
7. Fully tighten all four screws. To prevent stripping, put pressure on the back of the drill with one hand as you tighten.
8. Flip the stand over so the legset you just installed is on the bottom, and the sideboards with the holes are facing upwards toward you.
9. Repeat the same procedure to attach the other legset to the sideboards. You're done!

If after assembly, the stand has a slight wobble on hard surfaces, this can be corrected by loosening all eight screws slightly, setting the stand in an upright position, and having a helper push down with their weight on the top of the stand while the screws are re-tightened.
